

Pre-Conference student Workshop

Council of Engineering Systems Universities CESUN

Introduction

The main objective is to have graduate students from various places to get together and share their experience and thoughts on the future. The workshop will take place Tuesday June 19, 2018, between 13:00 – 16:00, and will be followed by an informal after party for those who wish to continue the conversation.

Goals

- Develop a scholarly community by connecting graduate students in the CESUN community to one another.
- Provide an opportunity for collaborative exchange with mentors and peers relevant to participants' research.
- Enable students to interact with academics as well as professionals through a post-graduation focused panel discussion.

Who should attend

We expect that students who already have specific thesis direction will likely get the most out of this Workshop, so we encourage students who have an accepted research proposal or are currently working on one to apply. To encourage meaningful interaction for all participants, attendance to this workshop will be limited.

How to apply

Please register using the link below and briefly state your current problem area and proposed or on-going work in the designated textbox. Please also highlight any specific issues you've run into that you'd like to discuss at the workshop session or any topics you'd like to see addressed in the talks focused on conducting research.
